Munich, Germany

About CapTec

CapTec aims to generate superior returns in financial markets by developing independent strategies for emerging investment opportunities. We are committed to data-based decision making and believe in technology built by an interplay of human creativity and machine intelligence.

What we offer

- Broad range of tasks and challenges across all business dimensions
- Autonomous working style
- Flat hierarchies and idea meritocracy
- Deep intellectual challenges and insights around current market trends
- Exposure to senior clients and partners
- Attractive salary

Tasks & Responsibilities

- Establish and maintain API connection to brokerage services
- Extract patterns from vast amounts of data
- Create and validate general market hypotheses
- Create and test trading strategies on real market data
- Derive comprehensive KPIs for system evaluation
- Visualize data insights for client presentations

Profile & Qualifications

- Engineering background (math, computer science, etc.)
- Experience in programming (e.g. Python, Javascript, etc.)
- Experience with statistics and machine learning (optional)
- Fascination for new trends in financial markets
- Mindset principles: Reasoning before authority, pragmatic problem solving, drawn to intellectual challenges, questioning the status quo
